

# Eliminate Slugging, Increase Capacity up to 25%

**NO MORE SLUGGING**, increased ground speed, enhanced fuel economy, and a better clean grain sample? While it might sound too good to be true, the Midwest 60 and 80 Series rotor will dramatically improve the performance of your Case IH® harvester in each of these areas.

Installing the Midwest rotor will have a direct impact on your bottom line:

- A slugging machine uses an excessive amount horsepower and fuel. The front spiral of our Midwest rotor consistently augers the material in for smoother and more efficient machine operation.
- Worn or damaged combine rotors are less efficient at grain threshing. They adversely affect the clean grain sample and even cause grain to pass right out the straw walker.
- Damaged or out of balance rotors cause vibration at high revolutions per minute. This can lead to extensive damage, requiring time consuming repair in the middle of harvest.

**OUR COMMITMENT TO** quality gives us the confidence to offer a full one year warranty on materials and workmanship.

Specialty and standard rotors are less efficient and require more horsepower to perform.

Midwest rotors perform better, last longer, and save fuel.

Call for more information or visit a local dealer near you!

We have a unique program available that allows you to trade in your existing rotor towards the purchase of a Midwest rotor.

We buy and sell used rotors from all makes and models.
